

Integral Platform for Disease
and Theranostic Modelling

A reliable partner for pharma and biotech industries and academia.

DISMOD is a **European consortium** of leading research groups with synergistic capabilities joining efforts on a multidisciplinary and bench-to-bed strategy for preventive medicine and integral treatment.

We develop end products and applications for clinical use: Friendly computer interfaces for theranostic and prognostic use based on merging basic science, systems medicine, data-based modelling, clinical validation and informatics.

1 INTEGRAL DISEASE MODELLING

Integrating pathophysiology with molecular and signalling networks in cells, tissues and whole body.

2 PATIENT STRATIFICATION

A personalized method to analyze patient phenotypic and genotypic disease background.

3 PERSONALIZED TREATMENT

A rational way to predict pharmaco-toxicological response in an individual basis.
